Description

Product Details

Developed as an entirely new design from the minds at BOSS, the SR MAG has everything contractors need to dominate the snow and ice. The SR MAG is fueled by a turnkey, electronic fuel-injected engine with 747 cc displacement. The electronic throttle body senses, reacts and optimizes power to ensure that the SR MAG can perform in even the heaviest snowfalls. The electronic throttle body makes operating the SR MAG easier with smooth acceleration and deceleration. The SR MAG body is designed to direct engine-heated air toward the operator's hands and body – while protecting parts and system components from the elements. Its chassis is crafted of stainless steel and its battery is optimized for winter weather, delivering 690 cold cranking amps, so you never have to worry about getting started. The SR MAG also features the ability to add an arsenal of new attachments, expertly crafted to handle any snow or ice-related issue including a v-plow, straight-blade, snow thrower (STX48), broom (BRX48), broadcast spreader (TGS85 and drop spreader (Exact Path). Utilizing BOSS's proven quick attachment technology, switching from one attachment to another can be done in a matter of seconds. And with 25 degrees of upward lift capability, the SR MAG can navigate curbs and bumps with ease.
