Price: $19,500.00

Description

Legacy Series 750

This unit is loaded with the features you need to get the job done as efficiently and effectively as possible.
It is **completely wireless** and controlled via Bluetooth through the VSI Spray Control App.
The app also gives you the ability to **track jobs** and make adjustments in real time depending on conditions.
This unit is capable of handling post treatment application and in a pretreatment application.
This sprayer offers standard features that other companies would consider upgrades or add-ons.
Standard Features

- **GPS Rate Control:** Electronics in the system monitor the flow to the boom and adjust according to the speed of your vehicle. It's as easy as setting your application rate in the controller and turning the boom on. No more over or under application resulting in wasted product or unsafe surfaces.
- **Kohler Electric Start:** These engines are easy to start in the extreme cold and run reliably. They are paired to a 2" Banjo poly pump and provide plenty of flow to the boom to give the system a max speed of 17 MPH at 80 gallons per acre with all three booms on.
- **Single Lane "Pile Driver" Boom:** Our new boom design has been torture and field tested to hold up to accidental beatings. With the heavy duty metal shroud it's almost impossible to put out of commission. Boom features jet tips for post treatment and high speed pretreatment applications, and a broadcast tip for even coverage in low speed pretreatment applications.
- **Smartphone Connection:** All sprayers are controlled via wireless connection from a smartphone or device. Provides a wide range of features for adjusting and monitoring total usage, per account usage, current tank level and adjusting application rate on a per acre basis. This also eliminates the need for a wiring harness.
- IP-67 Rated Lights and Strobes: High quality LED light to help see behind you and two strobe lights facing backwards.
- **Magnetic Flow Meter:** No moving parts on the inside to calibrate or fail. This flow meter reads accurately even with the density changes of additives that would cause a turbine flow meter to be off unless calibrated every storm. Turbine flow meters can be off up to 33% at the end of one season and quick to fail, while these will perform as expected season after season.
- **Full Tube Fork Pockets:** No risk of having your forks damage any plumbing when loading and unloading the sprayer. This sprayer is equipped with front and side fork pockets for ease of loading in multiple situations
- **Self Loading and Pump Out:** This system is able to self fill from storage tanks or any other tanks that don't have a pump to load. No more buying extra pumps just to fill from storage tanks. It also has the ability to pump out into other sprayers with a full 2" line. Any smaller sprayer on the route can be filled in minutes by this sprayer and resume spraying.

Available Options:

- 100' Hose Reel
- CHSML - 3rd Brake Light
- 12v Charge kit, w/o Battery
- Surge Balls
- Handheld Controller
- 34' Harness - Truck Side (28' standard)
