Description

Heavy-duty 14.25" diameter stainless steel spinner provides years of reliable operation and excellent spread pattern. The full stainless steel auger with heavy-duty material agitator breaks up clumps and maintains steady material flow for efficiency. The fork design allows for ease of operation in daylight or darkness. Includes hardware assembly.
Three Types of Material
Fine Deicers, Coarse Deicers & Sand/Crushed Rock.

FINE DEICING MATERIALS (Bagged Deicers) 1-4
Deicers with tiny granules in smaller bags or 5-gallon pails
COARSE MATERIALS (Bulk Salt) 5-7
Deicers with larger granules can be purchased in large quantities. If you manage several snow and ice accounts that require deicing, you will most likely need a higher capacity spreader and may also need to purchase deicers in bulk.
SAND & BULK SALT MATERIALS (Sand/Salt & Sand) 8 & 9
When using sand as a deicing material, make sure your spreader is designed to handle this material type.
