Description

Starting at \$297 plus installation. This is a vehicle specific part. Call us for a quote on a set for the front or rear of your application

AeonRegistered springs are at the core of Timbren's towing, hauling, and off-roading products. So what, exactly, are they?

As an alternative to air, metal, or foam springs, AeonRegistered springs improve suspension performance both as a sole suspension and as a spring helper. Made from 100% natural rubber, our AeonRegistered springs offer a progressive spring rate. This means that the more weight applied, the harder the springs work to level your load. And absorbing road shocks? AeonRegistered springs do that, too. The self-damping quality of our rubber springs give you a smooth, comfortable ride, even when fully loaded. Our AeonRegistered springs are the reason Timbren has been a leader in suspension enhancement systems for more than 50 years.
