The Southland 7x14 16k HS is one of the best and most inexpensive high-side trailers on the market! However, being lighter weight and less expensive does not make it a cheaply made or designed trailer. Southland has made all kinds of trailers since the 1980s, from single axle 5x10s to

commercial gravel pups, dump truck boxes, 50-foot-long haulers, and so much more!

The 7x14 16k High Side offers everything you want and needs in a dump trailer. Southland builds this trailer the same way as all their other dumps. The frame is a stacked 2x6-inch tube frame that is composed of two parts, one being the tongue frame, and the other being the dump box frame. This two-piece frame design allows maximum support in the frame when the trailer is loaded. The 7x14 16k HS sits on two Lippert axles where a multi-leaf spring suspension system rests under the equal-flexing equalizer. The dump box itself is composed of a 10-gauge floor and walls. Under the bed, you will see two full-length re-engineered runners that provide extra support to the underbelly. These supports are strategically placed where loaded equipment will sit directly on top of them. However, when you are unloaded the trailer is still super lightweight to offer you better mileage while towing empty to and from the job site. Furthermore, this lightweight design gives Southland the largest payload capacity for a trailer of this size, payload capacity being around 13,300 pounds. On all Southland's 16k HS trailers standard features include the tarp kit, HD aluminum ramps, spare tire mount, 14-ply tires, battery charger, adjustable coupler, 4-D ring tie downs, 14 stake pockets with a rub rail, 3-way gate, stabilizer jacks, sidewind jack and a large lockable toolbox.
