2026 Sawyer Trailers 8.5 X 20 X 7.5 ENCLOSED TRAILER DOVE GRAY Other

Type	Trailer or Truck Bed	**Category**	Other
Stock#	003187	**VIN**	71H1E2026TC003187
Location	Clovis	**Year**	2026
Status	Available	**Condition**	New
Manufacturer	Sawyer Trailers	**Model**	8.5 X 20 X 7.5 ENCLOSED TRAILER DOVE GRAY
Msrp	11799	**Fuel Type**	N

https://clpequip.com/unit/2026-sawyer-trailers-8-5-x-20-x-7-5-enclosed-trailer-dove-gray-other-1258371

Price: $11,199.00

MSRP: $11,799.00

Description

Sawyer trailers are built for people who actually use them. Every decision, weld, and component is chosen to solve the problems trailer owners are tired of dealing with. Rattles. Leaks. Misaligned doors. Early failures.
This is how we build trailers differently.

1.) A Frame That Stays Square Under Load.
Every Sawyer trailer starts with an all-tube steel frame engineered for strength and long-term durability. Tube construction distributes weight evenly and resists twisting under heavy loads and repeated towing.
Benefit. Less frame flex, better door and ramp alignment, and a trailer that still feels tight after years of real use.
All-tube trailer frame. Heavy-duty trailer construction. Commercial grade trailer frame.
2.) Welds Built For Real Stress.
Critical joints are fully welded, not stitched or skipped. This creates continuous load paths that handle potholes, hard braking, and uneven terrain without cracking or fatigue.
Benefit. Stronger structure, longer frame life, and confidence when hauling valuable or heavy cargo.
Fully welded trailer frame. Heavy duty trailer welds. Durable enclosed trailer.
3.) Cleaner Exterior With Fewer Failure Points.
Sawyer trailers use a screwless exterior design. Fewer penetrations means fewer places for water to enter and fewer fasteners to loosen over time.
Benefit. A cleaner professional look that lasts longer, with reduced risk of leaks and panel issues.
Screwless enclosed trailer. Leak resistant trailer exterior. Aluminum enclosed trailer.
4.) Doors That Stay Square And Seal Properly.
Frames are jig-built and checked for squareness before skins are installed. Doors, ramps, and openings are aligned from the start, not forced into place later.
Benefit. Doors that close smoothly, ramps that operate correctly, and seals that keep weather out year after year.
Enclosed trailer doors. Ramp door alignment. Weather sealed trailer.
5.) Water Management Done Right.
Roof design, trim placement, and exterior transitions are engineered to move water away from seams and openings instead of trapping it.
Benefit. Dry cargo, fewer interior repairs, and better long-term protection from rain and road spray.
Leak resistant trailer roof. Weatherproof enclosed trailer. Water resistant trailer design.
6.) One-Piece Aluminum Roof Construction
A single-piece aluminum roof eliminates unnecessary seams that commonly cause leaks in multi-panel designs.
Benefit. Fewer maintenance issues and long-term protection from the elements.
One-piece trailer roof. Aluminum enclosed trailer roof. Leak resistant trailer roof.
7.) Torsion Axles For Smoother Towing.
Independent torsion axles reduce bounce and vibration compared to traditional leaf springs. This protects cargo and improves control on the road.
Benefit. Smoother towing, better tire wear, and less shock to tools, equipment, or race vehicles.
Torsion axle trailer. Smooth towing enclosed trailer. Cargo protection trailer.
8.) Durable Painting Process
Every frame is prepped and dual coated before assembly.
Benefit: A frame finish built to handle moisture, salt, and time.
Acrylic Enamel painted trailer frame. Durable trailer coating.
9.) Premium Components Where It Counts
Sawyer trailers use proven components like Demco couplers, TecNiq LED lighting, heavy-duty ramp gates, and 8-ply tires.
Benefit. Fewer breakdowns, better safety, and components that hold up to daily use.
Premium trailer components. LED trailer lighting. Heavy duty trailer tires.
