Price: $10,999.00

MSRP: $13,138.00

Description

HDV(tm) V-Plow
Dorn Force - Scrape Maxx!! (included)
The HDV heavy-duty V-plows are built like nothing else on the market. Available in either durable powder-coated mild steel or rust-resistant stainless steel -- and with either 8'6" or 9'6" blade widths -- the plows boast 16-gauge flared moldboards that are reinforced by two robust angled power ribs. Double-acting angle cylinders, trip-edge protection,

adjustable center cutting edges and responsive direct lift round out the many advantages of these feature-packed V-plows.

Trip-Edge Protection

Protect Yourself. Protect Your Equipment.

Independent trip edge protects the plow, truck and operator when encountering obstacles and functions in any position (scoop, V, angle or straight). Because only the edge trips, snow loads are never lost.

Flared Moldboard

Throw Snow Farther

The unique flared moldboard design doesn't just give the plows a more aggressive look, but the performance is more aggressive as well. The tall flared wings throw snow higher and farther to clear the way quickly and effectively. An integrated snow catcher at the center of the plow further helps ensure snow gets put in its place by not allowing it to spill over the top.

LED Lights extra

Note - Some vehicles may require additional parts not included in this price.
