Western Marauder 2.2 Cu. Yd. Spreader Std Chute Conveyor**Includes Installation

Type	Equipment	**Category**	Salt Spreader
Stock#	BW32520	**Location**	Boothwyn, PA
Year	2026	**Status**	Available
Condition	New	**Manufacturer**	Western Products
Model	Marauder 2.2 cy		

https://thehitchmaninc.com/unit/western-marauder-2-2-cu-yd-spreader-std-chute-conveyor-includes-installation-631813

Price: $7,795.00

Description

It's your job to make sure the world keeps moving ... and to do that, you need ice control equipment you can rely on. The all-new MARAUDER stainless steel hopper lineup is engineered to get the job done right. Choose the best material delivery system for your operation based on the de-icer you commonly use ... either the all-new HELIXX shaftless auger for precise rock salt application or the pintle chain conveyor that's perfect for thick, heavy de-icing materials. Whatever choice you make, you'll get the delivery performance you demand.

HELIXXTrademark Auger Technology

Patented corkscrew material delivery system is optimized to operate in the target range for rock salt spreading best practices. The auger has multiple pitches to help promote smooth, even material flow from the hopper and prevents bridging. The shaftless technology reduces drag on the motor and reduces the overall load on the electrical system.
** Auger Models Only (S150A, S220A, S300A, S400A, S500A)*

PINTLE CHAIN CONVEYOR

The large conveyor delivers reliable, smooth, and consistent material flow for heavy, dense materials while reducing bridging.
** Chain Models Only (S150C, S220C, S300C, S400C, S500C)*

HOPPER CONSTRUCTION

The hopper is made from corrosion-resistant stainless steel and constructed entirely of rivets and bolts, with no welding. This provides a cleaner stainless look and is easier to repair for long-life and protection against stress.

Extended Material Delivery & Pre-Wet Chamber

A material delivery extension reduces leaking/spilling during transport. This provides a more cab forward design, allowing for added stability and weight distribution of the hopper.
When equipped with the optional pre-wet accessory, it leads into the patented pre-wet mixing chamber.

Wiring Channel for Ease of Install

Channels on either side of the hopper allow wires and cables to be easily run from the hopper to the cab for a clean installation.

Steeper End Caps

The end caps are at more of an angle to provide better material flow so the hopper load can be evenly spread with each fill.

Control

Enhanced dual variable-speed control allows you to precisely match material delivery and spread patterns to conditions. Four standard accessory buttons and a dedicated blast button provide optimum in-cab efficiency.
Easy-to-understand, digital self-diagnostics alert the operator when the spreader is empty or when adjustments are needed, and LEDs make the control easy to read. Its compact size compared to traditional controls fits easily into today's modern truck cab designs.

Electric Motor

The two high-torque 12-volt electric motors provide quiet, reliable and independent control over the conveyor and spinner mechanisms. The spinner motor is sealed inside a weather-resistant housing, protecting it from corrosion, while the conveyor motor is completely sealed from the elements.

Shutter Deflector

The easy-to-adjust circular shutter deflector allows directional spreading, providing optimal material control, while maintaining even coverage. For quick adjustments, simply move the convenient hand operated lever.
