Price: \$1,195.00

Description

There's no need to run an electrical harness from the spreader to the cab when using the SnowEx SR-210 wireless tailgate spreader. Designed to handle bagged rock salt, this plug-and-play unit features a vertical high-flow auger with patented spinner motor for rock solid performance. Ice management has never been easier than with the SR-210 salt spreader. Just install the unit in a 2-inch (51 mm) receiver hitch and connect the 7-pin harness for plug-and-play operation. Then use the pocket-sized wireless key fob with two spinner speeds to control the spreader. Bagged rock salt

requires a specialized material feed system for accurate spreading. The SR-210 comes equipped with a 3-inch (7.6 cm) vertical auger to properly handle the material.
