Price: \$41.00

Description

BLADE GUIDE ASSY

Western Part # 62265 Blade Guide Assembly is a crucial component that helps the operator visually determine the edges of the plow blade during snow removal operations. Typically mounted on the top corners of the plow blade, these guide assemblies often feature flexible, high-visibility markers that extend upward. These markers provide a clear indication of the blade's width, aiding in precise maneuvering and helping to avoid obstacles or property lines, especially in challenging conditions or during nighttime plowing.

This assembly is designed for durability and visibility in harsh winter environments. The flexible markers are intended to withstand impacts and bending without breaking easily. A properly

functioning set of blade guides enhances operator awareness and control, leading to more efficient and safer snow removal. Replacing damaged or missing blade guide assemblies ensures optimal visibility of your plow's edges. Always refer to your Western Plow's documentation and parts diagrams to confirm compatibility and proper installation procedures.
