Price: $83.00

Description

BLADE GUIDE ASSY POLY 36?
Western Part # 62590 is a Blade Guide Assembly, featuring a durable polyurethane (poly) construction and a length of 36 inches. Blade guides are essential accessories for Western Snow Plows, providing visual cues to the operator about the plow’s width and position relative to obstacles and the edge of the plowing surface. This helps to improve plowing accuracy, minimize damage to property and the plow itself, and enhance overall operator control, especially in low visibility conditions.

This particular assembly features a 36-inch long guide made from high-visibility polyurethane material. Polyurethane is chosen for its excellent abrasion resistance, flexibility, and ability to withstand the harsh winter environment, including impacts, cold temperatures, and exposure to salt and other de-icing agents. The bright color of the poly guide ensures it remains easily visible to the operator from within the cab. The assembly typically includes the poly guide itself and the necessary mounting hardware to securely attach it to the top edge of your Western plow blade. By installing the Western Part # 62590 Blade Guide Assembly, you can gain better spatial awareness of your plow's position, allowing for more precise snow removal along sidewalks, driveways, and other boundaries. This helps to prevent accidental scraping of curbs, mailboxes, and landscaping, as well as ensuring a cleaner and more efficient plowing operation. The durable poly construction ensures the guides will withstand repeated use throughout the winter season. Always refer to your Western Plow's documentation to confirm compatibility with your specific plow model and follow the provided installation instructions for proper and secure mounting of the blade guide assembly.
